Treatment
Advice

Your medical aesthetic practitioner has given you this card to remind you of some advice to follow after treatment with JUVÉDERM®.

Please refer to the leaflet supplied with the product.

.....
If you need any further advice, or information please contact your aesthetic medical practitioner.

- Immediately after treatment it is quite normal for there to be slight redness, swelling and tenderness around the treated area. These signs generally disappear in a few days but if they persist for longer, please contact your medical aesthetic practitioner.
- It is recommended that you do not use any makeup for 12 hours following the treatment and that any extended exposure to the sun, UV rays and temperatures below 0°C be avoided.
- Do not enter a sauna or similar environment for two weeks following treatment.
- Do seek the advice of your medical aesthetic practitioner if you suffer from an outbreak of facial cold sores immediately after treatment.
- If you are taking aspirin, high doses of vitamin C or any other anti-coagulants the risk of bruising and bleeding may be higher. Discuss any concerns you may have with your medical aesthetic practitioner.
